

# VIAVI PCT Calibration

Protect your investment in a VIAVI PCT by ensuring it is always operating at its best. VIAVI provides multiple PCT Calibration Service options designed to align with diverse customer needs. In addition to standard Return to Factory calibration, options also exist for VIAVI to go directly onsite to customer locations thereby maximizing the uptime of these valuable assets. Customers can then further select from various Service Levels associated with the reporting detail they require.

## Standards

Instruments are calibrated based on general requirements for the competence of calibration and testing laboratories (ISO/IEC 17025:2005) using applicable VIAVI Solutions procedures, IEC 61280-4-1, IEC 61280-4-2 and IEC 62614 guidance. Results are traceable to French National Standards and NIST which are consistent with the recommendations of the General Conference on Weights and Measures (CGPM), or to standards derived from natural constants, or to standards relying on ratio measurements with self-calibrating technique for their calibration. Calibration procedures are VIAVI Solutions developed and to ensure best practices and standards throughout the VIAVI Service Network. Service Reports include document control numbers for processes and procedures.

## Overview

VIAVI offers Onsite and Return to Factory options that allows customers to select the offering that works best for them.

- Conduct a top-level functional test of the instrument to verify that vital functions perform as expected
- Inspect and clean the optics and optical connections
- Verify to traceable standards the measurement accuracy of test instruments
- Document findings with a report of observations, measurements and actions
- Update calibration dates and/or provide calibration label noting date of calibration and due date for next calibration (after consultation with customer)
- Perform instrument and module maintenance to extend product lifetime
- Perform software updates

## Services

### Onsite Verification

For customers that are unable to return their product to VIAVI for service, VIAVI offers an onsite validation service. With this option, a VIAVI technician comes directly to the customer site and will perform functional test and (if necessary) calibration including a cert and calibration sticker.

### Onsite Calibration

This offers an upgrade to the level of service received for customers opting for onsite services. With the Onsite Calibration, the customer receives all the same services as the Onsite Verification with the addition of a detailed report that identifies as received/final condition of the product as well as the detailed test results for each product tested.

### Return to Factory

Return to Factory service is a comprehensive Service option that includes, functional testing, recalibration (if necessary), implementation of necessary engineering changes, software upgrade, calibration sticker/cert and calibration report. This option is available for all currently support PCT products, mainframes and modules.

### Onsite Maintenance

In some cases, minor repairs can be done onsite at the customer location during an onsite calibration or verification engagement. This type of repair could include replacement of damaged adapters or ejector handles, and software updates. For cases where products need to be returned to the Factory for repair, VIAVI personnel can help to ensure that returned products have accurate information to ensure efficient processing.
